

Choose a Smarter Fan

SenseME technology, available exclusively on the Haiku ceiling fan, revolutionizes a home fixture that hadn't changed for decades.

Truth in Materials

Haiku® with SenseME™ is handcrafted in the U.S. of the highest-quality materials, such as sustainable Moso bamboo or durable, glass-infused matrix composite. Each Haiku is also hand-balanced in a 13-step process, ensuring no fan will ever wobble.

Senses Motion

Forget switches, pull chains and remotes. SenseME detects when you enter or leave a room and turns Haiku on and off automatically.

Monitors Conditions

SenseME monitors a room's temperature and humidity, automatically adjusting Haiku's speed when conditions change. If the sun heats up a room, SenseME detects the warmth and increases Haiku's speed. Open a window at night and SenseME will automatically reduce the fan's speed as the temperature drops.

The Thinking Fan

If you change Haiku's speed, SenseME remembers what you find comfortable and makes more personalized adjustments in the future.

Efficient and Silent

Haiku's revolutionary motor technology makes it the ENERGY STAR® most efficient ceiling fan three years running.

Innovative Controls

Use your smart phone to control Haiku's seven speeds, LED and unique modes, including, Sleep and Whoosh®.

Integrated LED

Unlike typical ceiling fan lights, Haiku's patent-pending LED seamlessly integrates into the fan. The LED's digital dimmer includes 16 unique brightness settings.
